Company Profile

We are delighted to introduce ourselves as a leading manufacturer, supplier, service provider and technology consultant of Medical Gas Pipeline Systems. We have supplying and fixing our products for the last 31 years at various Medical Institutes, Hospitals & Nursing homes. Use of advanced technology has allowed us to ensure exactness & accuracy in products manufactured. We have successfully achieved a notable place in the market, owing to quality of products and services. Our widespread R&D activities support us to offer safe & hygienic gas delivery systems to our customers.

We have a well equipped manufacturing unit with refined equipments that permit us to achieve the target for bulk production, within time frame given by our customers. Use of latest design software's inspires us to deliver dimensionally accurate products and according to the needs of our customers. further, the entire manufacturing and assembly line is supported by our best efficient and experienced workforce. Our strict firmness on Quality Control during manufacturing process together with R&D inputs guarantees superior quality products to reach the end users. It is our advanced R&D division that has been constantly contributing to develop & offer the best quality of Medical Gas Pipeline Systems (MGPS) products. The entire business operations at our facility are successfully accomplished by qualified and skilled promoters of the company.

Our products are of utmost standard and quality giving constant and freedom-free performance and service leaving no space for any complaint. Our after sale service together with guarantee on various products are a plus point to our Brand Name- SHIVA SHAKTI GASES, which is authenticated from our annual turnover. Our customers are completely satisfied with our performance and efficiency.

Our products matches to International Quality Standards (IQS) resulted to hold "CE" Mark. We have been catering our services according to the needs of Medical College, Hospitals & Nursing homes all over india. We are also well established in our dealer's network for various states of india such as Bangalore, Delhi, Hyderabad, Kerala, Maharashtra, Mumbai, Madhya Pradesh, Orissa, Punjab, Uttar Pradesh & Tamil Nadu etc.

It would not be odd to mention here that our effective prices are most competitive and reasonable according to the customer needs. It will be an honour for us, if you could kindly enlist our name in your project list and favour us with your valued enquiries which will be quickly attended by our competent work force with lighting speed.

Looking forward for long standing association with you. Thanking You in anticipation of your co-operation.

Vision & Mission

To be the best performing and leading manufacturer, supplier, service provider and technology consultant of Medical Gas Pipeline Systems (MGPS) company in the world as determined by our customers, employees, suppliers and the communities in which we operate.

Making well equipped innovative medical equipments to enhance the utmost needed care to each patient more homely. We develop our products with update technology which help for sustaining and by giving support to Doctor's to give better care to patients with latest equipments. We are committed in continuous improvement (KAIZAN) related to quality performance so as to reach our mission and goal.

SHIV SHAKTI GASES

AND MEDICAL PIPELINE SYSTEM

ABOUT

We are leading supplier of Medical & Industrial Gases in Muzaffarpur, Bihar, India.

Our Specialization:-

- 1) Medical Gas Supply
- 2) Industrial Gas Supply
- 3) Oxygen Pipeline Installation
- 4) AC & Refrigerant

Medical Gas Control & Automatic Changeover

Automated Control Panel is a panel attached to 2-4 banks having multiple gas cylinders. Automated Control Panel System contains analog pressure meter for displaying pressure of each incoming bank and main line gas pressure. As soon as the gas in one bank runs below set pressure, it sounds an alarm and switches to the other bank. Specific colored LED Lights indicate the along the banks and the mains. The Digital Automated Control Panel displays actual pressure in each bank. The feature of parallel system is available in which multiple displays are placed at different locations (or floors) which also show the same indicators as in the main system. These panels come with RS-485 Modbus interface for BMS connectivity. Provision is made for adding external NO/NC interface for each bank individually. GSM Gateway can monitor the status of each Automated Control Panel and report status as desired.

AND MEDICAL PIPELINE SYSTEM

Nurse Call System

Nurse Call system acts as an interface between patients and the hospital administration/nurses. The main unit is placed with the administration and its subordinate 'Corridor panels' placed outside every room. The corridor panel is then connected to the very compact, easy to handle bed panels which are used by the patients to call the nurse. Nurse Call System makes the patient administration efficient and greatly simplifies patient care. The patient can press the appropriate button when he requires assistance, which will then show on the corridor and main panels. If the nurse is near the room, she will see the corridor panel light and immediately assist the patient. Otherwise, the attendant at the main panel can acknowledge the call, which will light up the LED 'waiting' on the bed panel informing the patient his call has been acknowledged. The main panel displays the corridor wise and room wise segregation of panels. The usual problems associated with installing such system are extensive and complicated wiring. The usage of single cable wiring in Nurse Call System makes sure wiring is easy and not expensive.

The system's module consist of :

- Central Display Console
- Corridor Unit
- Bed Side Unit
- Bathroom Unit
- Patient Remote

Alarm System

Digital Gas Alarm Systems

Master Alarm

Digital Gas Alarm Systems come in 1,2,3,4,5,6,7 and 8 gas categories where the number indicates the number of gasses the system can handle. The system measures the pressure of the different gasses coming from the pipe lines and displays the measured levels on the panel in psi and bar. In case of High Pressure or Low Pressure it generates appropriate Alarm. These alarms Come with RS-485 Modbus interface for BMS connectivity. One NO/NC terminal is built-in for alarm extension and provision is made for adding external NO/NC interface for each gas individually. The alarm is shown on the administration and can also be communicated through SMS using GSM Gateway.

Analog Gas Alarm Systems

Master Alarm System is a mainly used in the system for providing information and current status of multiple gas alarm and is capable of supporting various gas alarms of different gas categories. The main feature is for remote monitoring of various gas alarms installed in Hospital's rooms with displayed color LEDs. The main benefits of this product are:

- ◆ Support for multiple gas alarms (Max up to 20).
- ◆ Different category gas alarm support (2 Gas to 6 Gas type).
- ◆ Real time and simultaneous monitoring.
- ◆ Interactive color LED's, push buttons and 7-segment display.
- ◆ Buzzer provided for sound alarm.
- ◆ Mute and test buttons.
- ◆ 485 connectivity for long range.
